

The Ideal Pick:

# RISO ComColor for Your Warehouse Logistics

**Attention warehouse logistics  
managers and IT managers:**

## How do you handle picking?

**Produce packing and shipping documents more  
efficiently and cost-effectively with RISO ComColor!**

### **It's quick!**

RISO ComColor is the world's fastest cut-sheet full-color inkjet printer. It prints pick tickets and packing slips at up to 150 ppm—that's 1,000 pages in less than 7 minutes!

### **It's versatile!**

RISO ComColor is extremely flexible. It can print pick tickets, labels, invoices, statements, envelopes, and more on a wide range of paper stocks and sizes.

### **It's reliable!**

RISO ComColor is highly dependable. This no-heat, non-impact inkjet device offers better reliability and uptime than toner-based devices.

### **It's friendly!**

RISO ComColor is user-friendly, eco-friendly, and budget-friendly. It's an easy-to-use production printer with no special power requirements, low energy consumption, and a small footprint. Combine that with an incredibly low total cost of ownership for an ideal solution that will exceed your printing and packing needs.

 **ComColor™**

# Only RISO ComColor...

- Can print high-impact full-color inkjet at speeds up to 150 ppm
- Can pull and print up to four different paper stocks on the fly.
- Has the lowest acquisition and pre-print running costs
- Has a realistic duty-cycle of 500,000 prints per month
- Has no premium for black-only printing on full-color engines

## A User's Voice: Logistics Company

RISO ComColor has become an essential tool for printing our pick lists and logistics forms.

### ***A huge number of documents are required in the logistics business***

“ Our company is in the 3PL industry. We have approximately 200 corporate customers and perform packaging/shipping for 50,000–100,000 parcels every month. Our main business consists of picking up multiple products in the warehouse, such as pharmaceuticals, according to the shipping destination. We then package the products into one box for shipping. This is performed by hand, so paper-based confirmation is important at our logistics center. Three documents are printed for every single package. One is the pick list; the other two are a delivery invoice and an information statement to be included with the package. That is a classic example of high-variety, short-run printing. ”

### ***Smooth and efficient printing***

“ Before we had the RISO ComColor, we used a laser printer to output those documents. For some jobs, it took us nearly half a day just to print and staple the documents. Since the ComColor and the finisher unit were installed, that work can now be completed by a single person in less than one hour. Better yet, it is not necessary to constantly monitor the printer during these tasks, so the hour can be spent on other work. ComColor offers exceptionally fast printing speeds, so there is no time loss in the packaging process. We have printed 870,000 pages since installing ComColor four months ago. In an industry like ours, a high-speed printer like ComColor is the ideal support tool. In the future, we plan to try printing integrated label invoices and packing slips that will make our work more efficient. ”
